PROFESSIONAL SUMMARY

Staff-caliber Software Engineer with 8+ years of experience designing, building, and operating scalable distributed systems powering eCommerce platforms serving millions of users. Proven track record architecting end-to-end commerce services (rate management, checkout, supplier connectivity) with multi-million dollar revenue impact. Drives cross-organizational alignment, mentors engineers, and delivers customer-obsessed systems at scale.

TECHNICAL SKILLS

Languages:	Java, Kotlin, Python
Frameworks & Libraries:	Spring Boot, gRPC, React, TypeScript, TestNG
Cloud & Infrastructure:	AWS (DynamoDB, Lambda, CloudWatch), Kubernetes, Docker, GCP
Architecture & Design:	Microservices, Domain-Driven Design, Event-Driven Architecture, Concurrency, REST/gRPC API Design
AI & Machine Learning:	LLM Integration (Claude/Anthropic), RAG Systems, AI Agent Development
Data & Streaming:	Apache Kafka, Avro Schema, DynamoDB, Data Ingestion Pipelines, Vector Databases
Observability & CI/CD:	Datadog, Splunk, PagerDuty, Spinnaker, Progressive Deployments, Automated Canary Analysis

PROFESSIONAL EXPERIENCE

Expedia Group | Seattle, WA

Software Development Engineer III (Staff-Level Scope) Jul 2022 - Present

- Architected an end-to-end rate management and selection platform spanning Rate DB, admin APIs, shopping APIs, and pricing integrations, establishing foundational supply infrastructure for B2B car rental distribution at scale.
- Co-designed a multi-service supply-as-a-service architecture with principal engineers, driving adoption by decoupling rate management, connectivity, and reservation fulfillment into independently scalable domain services.
- Drove rate plan management across B2B, Pricing, Connectivity, and Shopping teams, coordinating shared engineering resources and establishing integration contracts enabling parallel development across 4+ teams.
- Implemented a secure Connectivity API and service layer enabling direct supplier integrations, establishing extensible onboarding patterns with authentication and authorization controls that reduced integration time and eliminated dependency on legacy aggregation layers.
- Led end-to-end shopping flow design (Search, GetOffer, Offer Token, Final Pricing) with token-based encryption for sensitive pricing data, enabling partner adoption and incremental B2B revenue through the Rapid API.
- Delivered sale system handling 100,000+ bookings generating \$17M+ revenue in a single event; implemented intelligent caching achieving 60% data transfer efficiency improvement.
- Reduced sale activation time from two sprints to minutes by building a modular experimentation framework supporting multiple discount code types, A/B testing, and real-time decisioning across services.
- Led Catalogs service stabilization to 100% adoption, resolving 20+ critical bugs and optimizing Kubernetes autoscaling, achieving 90% pod reduction (300 to 30 pods) while eliminating memory leaks.
- Designed BatchGetCarItems API achieving \$16K quarterly cloud cost savings and 1.2s average search time reduction through optimization of the legacy implementation.
- Resolved critical XSLT performance bottleneck causing offer truncation at 1000+ results, eliminating revenue loss from dropped inventory in production.
- Architected cost-efficient Look-to-Book analytics dashboard using internal tooling, providing comprehensive GDS traffic visibility while avoiding expensive third-party solutions.
- Led design and development of a next-generation internal supply onboarding UI built with React and TypeScript,

enabling operations teams to self-serve supplier configurations at a granular level.

- Authored 23+ technical design documents spanning system architecture, API contracts, and integration specifications, driving cross-team alignment across engineering and product.
- Mentored junior engineers and contractors through pair programming, design reviews, and structured onboarding programs, significantly accelerating team productivity and raising the technical bar.

Tata Consultancy Services | Cleveland, OH

Software Engineer

Jul 2019 - Jul 2022

- Designed and built RESTful APIs for an API management framework in collaboration with product managers, eliminating 100% of manual intervention in deployment workflows.
- Developed backend logic for an eCommerce platform scaled to 2M+ users, improving response times by 20% through performance optimization.
- Built CI/CD pipelines with automated testing and deployment stages, enabling continuous delivery and reducing release cycle time from weeks to days across multiple service teams.
- Implemented observability instrumentation including distributed tracing, structured logging, and alerting dashboards, improving mean time to detection (MTTD) for production incidents.

Microsensor Labs | Chicago, IL

Software Engineer Intern

Jul 2018 - Aug 2018

- Developed an Android application integrating BLE devices for real-time data collection and health activity monitoring, delivering statistical analytics for day-to-day user metrics.

Vodafone Shared Services | Pune, India

Senior Executive - Application Operations

Jun 2016 - Jul 2017

- Implemented 'Heartbeat' cloud-based monitoring system in Java, reducing risk of monetary loss in millions through proactive system health detection.
- Developed shell scripts for billing and monitoring automation, reducing manual effort by 3 hours per day across operations teams.

L&T InfoTech | Pune, India

Graduate Engineer Trainee

Jan 2016 - Apr 2016

- Created Selenium-based automation scripts for unit testing infrastructure, reducing bugs reported in production by 8% through improved test coverage.

EDUCATION

Illinois Institute of Technology, Chicago, IL

Master of Science in Computer Science | GPA: 3.4/4.0

Aug 2017 - May 2019

University of Pune, India

Bachelor of Engineering in Electronics & Telecommunication | GPA: 4.0/4.0

Jun 2011 - Jun 2015

CERTIFICATIONS

- CP-BAT (Certified Professional - Business Agile Testing) - Agile Testing Alliance
- ISTQB Certified Tester - Indian Testing Board

KEY ACHIEVEMENTS & INNOVATION

- Co-developed AI-driven Cars Tool Assistant at Brainwave Hackathon, representing the Cars organization and demonstrating innovation in AI/ML-powered developer tooling.
- Contributed to shared front-end component libraries and established UI patterns for internal tooling, improving developer efficiency and consistency across the Cars platform.
